

Caterpillar Custom Kits & Parts

3300, 3400, 3500, and 3600 Series Engines

Custom overhaul kits are designed to provide convenience and efficiency to established purchasing, inventory, and repair processes. At PPS, we offer a variety of custom overhaul kits and custom repair kits based on typical work scopes.

We also offer the flexibility to create custom kits based on our customer's preferred work scopes. You can provide a parts list, and together, we can create a single, unique part-numbered custom kit for use in any repair or overhaul project.

We can create customized kits for various purposes, such as gasket kits, water pump repair or replacement, top-end projects, and complete overhauls.

The possibilities are endless, and we can cater to your imagination. We can also create subsets of major overhaul kits by developing customized gasket and repair kits.

Our packaging techniques allow for sub-kits to be immediately accessible upon opening a customized overhaul kit container. These sub-kits can then be easily distributed to corresponding repair cells or subcontractors.

Subset, gasket kit for the rear structure

Subset, gasket kit for front structure

Water pump repair kit

Pearce Power Solutions™ is WPI's CAT® Parts Aftermarket Brand.

We provide cost-effective solutions to maintain and optimize your Caterpillar engines.
